

## Step By Step Process For The Samsung Health

### Step 1: Install Required Apps

1. **Ensure the Latest Versions Are Installed:**
  - Download or update the **Samsung Health** app from the **Google Play Store** or **Galaxy Store**.
  - Install **Health Connect by Android** from the **Google Play Store**.
2. If you're using a **Galaxy Watch**, ensure the **Samsung Health version on the watch** is also updated to the latest version.

### Step 2: Enable Health Connect Permissions in Samsung Health

1. Open the **Samsung Health** app.
2. Navigate to:
  - Settings > Health Connect > App permissions > Samsung Health.
3. **Important Note:**
  - Permissions must be enabled directly in **Samsung Health**.
  - Avoid going through the general phone settings (Settings > Apps > Health Connect) to set permissions, as it may not work properly.

### Step 3: Sync Data Through Samsung Health

1. Open the **Samsung Health** app.
2. Go to:
  - Settings > Sync with Samsung account.
3. Tap **Sync Now** to ensure data is synced with your Samsung account.
  - This step ensures the latest data is ready for integration with **Health Connect**.

### Step 4: Confirm Sync in Health Connect

1. Open the **Health Connect** app.
2. Check if **Samsung Health** appears as a connected app in:

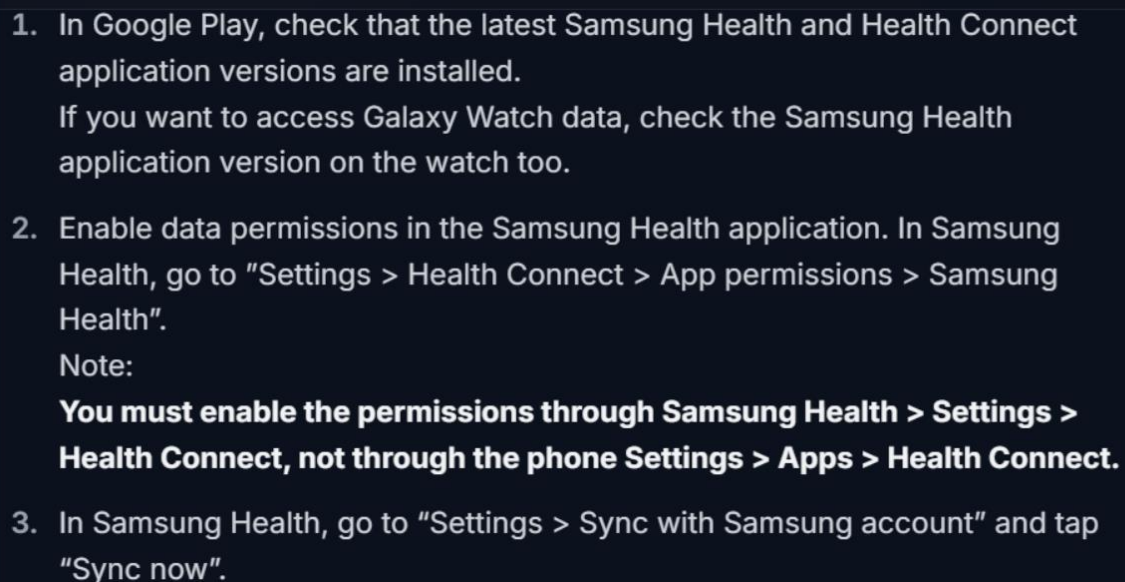

- Settings > Apps > Connected Apps.
- 3. Ensure Samsung Health has the required data categories enabled for syncing, such as:
  - Steps, heart rate, sleep data, etc.

#### **Step 5: MMV with Health Connect via Samsung Health**

1. Open the MMV app and confirm that data from **Samsung Health** is being synced properly.
2. Perform a test by updating some data in Samsung Health (e.g., logging steps or a workout) and verifying that it reflects in the MMV app via Health Connect.
3. **We would inform our users with a popup reminder in the app, that via health connect we can connect through the Samsung health device**

Note: This process ensures **Health Connect** is properly syncing data between **Samsung Health** and other apps you use. If you encounter issues, check for any Health Connect app updates or re-enable permissions in both apps.

#### **Attaching the image for a reference:**

- 
1. In Google Play, check that the latest Samsung Health and Health Connect application versions are installed.  
If you want to access Galaxy Watch data, check the Samsung Health application version on the watch too.
  2. Enable data permissions in the Samsung Health application. In Samsung Health, go to "Settings > Health Connect > App permissions > Samsung Health".  
Note:  
**You must enable the permissions through Samsung Health > Settings > Health Connect, not through the phone Settings > Apps > Health Connect.**
  3. In Samsung Health, go to "Settings > Sync with Samsung account" and tap "Sync now".

If we need as separate provider, we would need to utilize the **Samsung Health SDK** directly rather than relying on **Spike** or **Health Connect**. ?
